DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/3/04 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Aybay (US 6,052,368).

Aybay discloses a communication system comprising the following features: as depicted in Fig. 8, regarding claim 15, input ports (92, 94) receiving network variable length data packets;

Art Unit: 2667

a frame process component (Payload W, X, Y, Z) storing as words said data packets in a storage unit, creating queues (Payload W, X, Y, Z) of packet going to the same destination address and creating control blocks with packet information; a scheduler (132) designating a packet queue (Payload y, DataID Y) to be served at a given time; and a packet segmenting process component (Request A, B; Response A, B) preparing the segmenting information for assembling each fixed length cell result of the segmenting of the packet to be served in the designated queue. Aybay does not disclose the unit of fixed length cell is 64. See column 5, line 8 to column 11, line 8. However, it would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the system of Aybay, by using any size for the cell length, in order to provide an efficient data communication upon the specific bandwidth demand.

Allowable Subject Matter

5. Claims 1-14, 17 are allowed.
6. Claim 16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Calvignac et al. (US 6,714,562) discloses a method for segmenting network traffic.

Kamo et al. (US 6,546,012) discloses a variable length frame exchanging method.

Art Unit: 2667

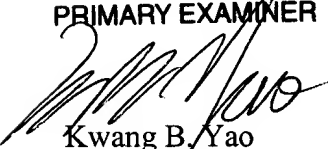

Kausmeier et al. (US 6,546,012) discloses a method for using ATM queues.
